

AUBERT&DUVAL

METAL POWDERS FOR ADDITIVE MANUFACTURING

www.aubertduval.com

Meeting the greatest of AM challenges

For almost a century, Aubert & Duval has been providing highly reliable metallurgical solutions that are developed, made and processed for the most critical industrial applications.

Thanks to our strong metallurgical expertise and long-standing experience since 1975 in powder atomization, we can support our customers to achieve success in their development and series production made by additive manufacturing.

Stellar metal powders are tailored for the most demanding applications and markets

- Aeronautics
- Space Industry
- Energy
- Automotive/Motorsport

Additive manufacturing also called 3D printing, is a game-changing technology opening up new horizons for many markets. This fast-growing innovative technology leads to entirely new ways of designing and manufacturing complex parts, impossible to produce with conventional technologies.

The performance of our powders at the heart of your additive manufacturing success

With several decades of experience in powder metallurgy, Aubert & Duval has acquired a very thorough knowledge of design and optimization of metal powders in order to meet customers' most stringent requirements. Our core competencies include:

- Powder metallurgical expertise combined with state-of-art atomization technologies
- Large and scalable powder production capacity
- Customer-oriented services: flexibility and reactivity
- A mindset for continuous improvement and aerospace standards
- Stable and long-term partner
- Long-standing and leading supplier of aerospace critical parts
- R&D focused on innovative metallurgical solution through a collaborative approach

Stellar metal powders are designed for the full range of additive manufacturing processes

Powder Bed

- Laser Beam Melting
- Electron Beam Melting
- Binder jetting & sintering

Blown Powders

- Laser Metal Deposition
- Cold Spray

Key benefits

- Design freedom
- Weight reduction
- Material savings
- No Tools
- Less machining and assembly operation

A know-how dedicated to your needs

As we are aware of each customer's requirement, we can offer tailored metal powder, designing the chemical and mechanical properties according to your specifications.

We support our customers in the definition of metal powder specifications in order to develop new metallurgical solutions to achieve targeted part performance.

Stellar metal powders

Nickel superalloys

NiSA	
A&D grade	Properties
Ni718	<ul style="list-style-type: none"> • Excellent mechanical properties up to temperatures around 650°C / 1202°F • Good resistance to high temperature oxidation
HX	<ul style="list-style-type: none"> • Excellent mechanical properties at high temperatures (1100°C / 2012°F) • Very good resistance to oxidation
Ni625	<ul style="list-style-type: none"> • Excellent mechanical properties at high temperatures up to 980°C / 1796°F • Excellent corrosion resistance • Good low temperature toughness
Ni247	<ul style="list-style-type: none"> • High strength and superior creep resistance. • Excellent mechanical properties at high temperatures up to 1000°C / 1832°F
Ni738	<ul style="list-style-type: none"> • Excellent high temperature creep rupture strength (980°C / 1796°F) combined with hot corrosion resistance
AD730®	<ul style="list-style-type: none"> • For temperatures up to 750°C / 1382°F • High strength, creep and fatigue properties
ABD®-900AM®	<ul style="list-style-type: none"> • For high temperatures up to 900°C / 1652°F • Good strength and creep properties • Good oxidation and corrosion resistance For
ABD®-1000AM®	<ul style="list-style-type: none"> • For high temperatures up to 1000°C / 1832°F • Unique combination of printability and creep resistance • Excellent oxidation resistance

Special steels and Fe-alloys

HPS	
A&D grade	Properties
X15TN®	Stainless martensitic steel with outstanding hardness (+58 HRC) and high corrosion resistance (PREN 23).
InvHard	Alloy with low thermal expansion coefficient combined with a high hardness.
316L	Stainless steel with a low content of trace elements for nuclear applications.

Chemical composition

Powder size distribution

Particle inspection

Physical properties

Our offer includes

- Standard & customized compositions
- Tailored particle size distribution
- Packaging in plastic bottles or metallic containers,
- Handling, HSE and storage recommendations
- Flexible service

Quality control

Since 1975, Aubert & Duval has developed a strong experience of high quality gas-atomized powders together with a high level of expertise and dedicated laboratory equipment ensuring the highest quality for its metal powders:

- Powder size distribution: sieving and laser diffraction
- Particle inspection: Optical microscope, SEM, Porosity and Morphology
- Chemical composition: Main elements, Gases and Trace elements
- Physical properties: Flowability, Apparent density and Tap density

Our research centers and development teams support customers to develop new alloys and optimize powder characteristics to achieve the best material performance and processability for all additive manufacturing technologies.

Aubert & Duval partners with main global players to develop value-creating solutions.

Our powder atomization process

VIM Gas Atomization

Thanks to the most advanced technology in powder metallurgy and different scale of production units, Aubert & Duval can support you from first stages of development through industrial-scale production.

Key features

- Melting in VIM furnace
- N- or Ar-atomization
- High cleanliness level
- Highly spherical powder morphology
- Fully controlled low oxygen and carbon levels
- Minimize satellites & internal porosities
- High stability and reproducibility
- Broad range of batch sizes

Quality certifications

- EN 9100
- ISO 9001
- Customer accreditations

Our production facilities
