Applications

• GKH is used to produce nitrided parts which need to be extremely stable after hardening and tempering. It is particularly suitable for producing parts that undergo special nitriding.
• Gears, spindles, machine-tool fittings, crankshafts, precision parts, aircraft parts.
• Thrust rings, bearing races working up to 400 °C.

Characteristics

• Nitriding steel with an excellent level of hardenability and particularly high mechanical properties, impact strength and fatigue limit (GKHW and GKHYW grades).
• It may be nitrided in the heat treated condition to obtain a strength from 900 N/mm² to 1350 N/mm². The nitrided layer is ductile.
